

PREPARING YOUR WORKPLACE FOR THE RETURN OF YOUR EMPLOYEES

clarus¹

GOING BACK TO THE OFFICE

The COVID-19 crisis has caused major shifts in the way we work and how we experience the world, but we know that many of us will be leaving our temporary home offices and resuming work in our professional spaces very soon. With that said, how are you preparing your facilities for the return of your employees?

There are many precautions being taken around the globe to protect people, and they all translate directly to collaborative workspaces. Because your employees' health depends on a safe and clean work environment, Clarus is here to help ensure your team feels confident and valued when returning to the office. Together, let's find the right office space solutions that protect and empower your people. After all, the workplace still matters. It's time to rebuild your community and your culture.

WHY GLASS?

The new standard for workplace furniture calls for products made of materials that are easy to sanitize, while also matching the design aesthetic of the space. Clarus glass products answer the call beautifully.

Due to the non-porous and antimicrobial properties of glass, our hard surfaces can be wiped clean of all germs and bacteria with bleach or other harsh chemicals without damaging the integrity of the product. Plexiglass, acrylic, traditional whiteboards, and other laminate surfaces are porous, making them a breeding ground for bacteria. While these materials may be hard to clean thoroughly, glass sets the standard for cleanliness.

Additionally, Clarus products don't need to be replaced, which means they'll look just as good in 20 years as the day you installed them. We have found that data proves the lower cost price tag for low-end solutions comes with a higher total cost of ownership. Because Clarus glass products can last a lifetime, this results in big savings on replacement, installation, and maintenance expenses – not to mention a high ROI for style points and performance.

WHY CLARUS?

Clarus is more than just glassboards. Our commitment to excellence when producing the most premier glass products on the market means controlling all aspects of the manufacturing process. From fabrication to final assembly, a customer's order will never be outsourced, ensuring products are produced at the highest standards and the shortest lead times in the industry. Part of that commitment of excellence is Clarus' pledge to responsible manufacturing through Lean operations and 5S optimization methodology, a practice that results in higher quality, increased productivity, and safer work environments for employees.

From the quality of our raw materials, to responsible manufacturing processes and lifetime sustainability, Clarus is passionate about making beautiful products in the USA that elevate your space, without harming the environment. Clarus holds certifications that contribute to three different LEED credits— Environmental Product Declaration (EPD), Low Emitting Materials for Indoor Air Quality (IAQ) and Declare – supporting our promise to responsibly steward our position as the world's largest glassboard manufacturer.

THERMOBILE

TherMobile, a non-porous mobile board that serves as a protective shield during the health screening process, is your first line of defense against COVID-19 at the office. How will you take the temperature of your employees from a safe distance or handoff necessary documents at the entrance? TherMobile's small cut-out window allows you to do exactly this, all through a non-porous, easily cleanable safety shield. Thanks to the natural properties of glass, it can be sanitized completely, protecting all parties during health screenings.

HEALTH SHIELD

Keep your receptionist areas safe while welcoming visitors to your office with Clarus Health Shields. Clarus' Health Shields act as a non-porous cough/sneeze barrier between receptionists and visitors that can be easily cleaned and disinfected. It will be important to not settle for a porous material that is hard to disinfect. Porous materials such as acrylic and plexiglass harbor bacteria and scratch easily.

THE FUTURE OF WORKSPACES

It's no secret that workstations have evolved over time and are now comprised of tighter, open benching style components. So how do we de-densify workstations and create distance and barriers between employees when we don't have budgets or lead time to purchase all new workstations?

New standards will consist of non-porous, hard surface screens, and dividers to act as cough/sneeze barriers between desks. Soft and porous materials will all be replaced by hard, non-porous materials that can be sanitized with hospital-grade cleaning products.

With Clarus, you can find the right office space solutions that protect and empower your people to do their very best work.

DIVIDE

Collaborative, open-air desks will soon be a thing of the past. Employees are now looking for their own protected and divided workspaces. Clarus' product, Divide, acts as a cough/sneeze barrier between workspaces and can be customized to reach various heights. Like most of our products, we can custom match any glass color to coordinate with your existing furniture systems. We also offer translucent or opaque glass finishes.

DESK TOPS

Clarus Desk Tops are a quick and efficient solution to outfit your employees' workspaces with non-porous, cleanable surfaces that double as a marker board. Simply lay the Desk Top on the workstation, and it is instantly ready for use. Desk Tops' antimicrobial properties inhibit bacteria from spreading and allow for the surface to be thoroughly disinfected, creating a safe and clean environment for your employees.

ADAPT

Now, more than ever, fabric and other porous surfaces need to be removed to make your office environment safe and protected from germs. Adapt by Clarus is the easy, cost-effective upgrade for your furniture systems. Compatible with over 40 office-space organization and furniture systems on the market today, Adapt provides a turnkey, smart solution that fits perfectly, every time. It allows you to install cleanable, hard surfaces around your workstations, transforming what's already there without replacing it.

ADAPT

3-WHEEL GO! MOBILE™

Do you need a temporary solution for dividing workspaces while maintaining the integrity of your office? The three-wheel go! Mobile allows you to break up tight spaces by sliding a board between desks to create separation and private writing surfaces on each side. These mobile boards can be used independently between desks or hinged together with go! Hubs, constructing temporary walls that split up work environments into configurations that meet the needs of your space. Simply roll your go! Mobiles into place, set with go! Hubs and get to work at a safe distance.

FLEX™ WALL

Flex Wall is a free-standing glassboard wall system with a fully integrated, omnidirectional wheel system built into the base. The built-in wheel system allows Flex to roll easily from room to room. Then, this revolutionary design seamlessly transforms into a fixed, free-standing ADA compliant wall partition. Use Flex Wall to create temporary break-out rooms or office spaces without having to reroute electrical or HVAC systems.

Flex Wall Lift System

FLEX™ MOBILE

Flex Mobile is the most elegantly designed, functional glassboard on wheels ever brought to market. Its wide, strong base gives Flex Mobile an Eiffel Tower elegance while providing increased functionality and stability to the writable glassboard. Why give up sleek design and appealing aesthetics for safety when you can have both with Flex Mobile?
